

Amnesia Procedure and Understanding

### Amnesia back to Capacity for fun activity procedure

- If you get amnesia from negative symptoms of schizophrenia you may have to make it easier so here is a combined method for people who either have a bad memory or have amnesia at certain times
- This procedure is used with toolset seen in the images above
- You must see chemistry generation guide to bring your dopamine up to start the programming – See [CONFIDENTIAL] - FuZzCasT Dissociation Guide V1.0 or read FuZzCasT - Chemistry access instructions for provided chart and instructions
- This is for people with alien-controlled schizophrenia and see greys – They generally are sending information from the astral plane to help and offer this programming to people with brain issues
- When you bring up the dopamine using the chemistry generation procedure and then read these instructions it'll force the robot in to a room in your mind
- This is not real this is just a simulation
- Use the toolset to destroy the robot in your imagination or closed vision
- Then get the hallucinations (greys or whoever this might be) to send up your serotonin by getting them to do an arm swing with open ones and closed vision ones
- You capacity should return to enable to have fun again
- This works for both me and my sister
- If you still see greys in your room just enjoy their presence until the serotonin goes down too far then redo the procedure
- **This is critical for people who have amnesia**
